parameterized job or **build** allows you to pass specific inputs (parameters) to a job at runtime, making it flexible and dynamic. This is especially useful for jobs that need to be executed with different configurations or inputs without creating multiple jobs for each scenario.

☒ This project is parameterized ?

☰ **Boolean Parameter** ?

Name ?

Status

☐ Set by Default ?

Description ?

Is jenkins easy tool

≡ **Choice Parameter** ?

Name ?

Browser

Choices ?

Chrome
Firefox
Brave
Internet Explorer

Description ?

Please select the browser of your choice

≡ **File Parameter** ?

File location ?

Path

Description ?

Please provide the file path

String Parameter ?

Name ?

User Name

Default Value ?

kechiya

Description ?

A **crontab** (short for "cron table") is a configuration file used by the **cron** scheduler to define and schedule tasks (also known as cron jobs) on Unix-like operating systems. It is widely used for automating repetitive tasks, such as running scripts, backups, updates, or maintenance at specific times.

Build Triggers

- ☐ Trigger builds remotely (e.g., from scripts) ?
- ☐ Build after other projects are built ?
- ☒ Build periodically ?

Schedule ?

52 14 6 12 5

⚠ Spread load evenly by using 'H 14 6 12 5' rather than '52 14 6 12 5'

⚠ This schedule will match dates only rarely (e.g. February 29) or never (e.g. June 31), so this job may be triggered very rarely, if at all.

- ☐ GitHub hook trigger for GITScm polling ?
- ☐ Poll SCM ?
