

plugins

- In Jenkins, plugins are modular extensions that enhance its functionality, enabling integration with tools like Git, Maven, Docker, or Kubernetes.
- They allow customization of Jenkins to support various CI/CD tasks, such as source control, build tools, testing, deployment, and notifications.
- Plugins are managed through the Manage Plugins section, where you can install, update, or remove them. They are essential for tailoring Jenkins to your specific workflows.

The screenshot shows the Jenkins 'Manage Jenkins' interface. On the left is a sidebar with navigation links: '+ New Item', 'Build History', 'Manage Jenkins' (selected), 'My Views', 'Build Queue' (showing 'No builds in the queue.'), and 'Build Executor Status' (showing '0/2'). The main header area includes 'Dashboard > Manage Jenkins', a search bar for settings, and two warning messages: one about a broken reverse proxy and another about security issues with built-in nodes. Below this is the 'System Configuration' section with icons and descriptions for 'System', 'Tools', 'Nodes', and 'Clouds'. On the right, a 'Plugins' section is highlighted with a blue border, showing a gear icon, a red update indicator, and the text: 'Add, remove, disable or enable plugins that can extend the functionality of Jenkins.' Below the Plugins section is the 'Appearance' section with a paintbrush icon and the text: 'Configure the look and feel of Jenkins.'

It appears that your reverse proxy set up is broken. [More Info](#) [Dismiss](#)

Building on the built-in node can be a security issue. You should set up distributed builds. See [the documentation](#). [Set up agent](#) [Set up cloud](#) [Dismiss](#)

System Configuration

 **System**
Configure global settings and paths.

 **Tools**
Configure tools, their locations and automatic installers.

 **Nodes**
Add, remove, control and monitor the various nodes that Jenkins runs jobs on.

 **Clouds**
Add, remove, and configure cloud instances to provision agents on-demand.

 **Plugins**
Add, remove, disable or enable plugins that can extend the functionality of Jenkins.

 **Appearance**
Configure the look and feel of Jenkins

updates:

1. **New Features:** Gain access to newly added functionalities.
2. **Bug Fixes:** Resolve known issues or errors in older versions.
3. **Security Patches:** Fix vulnerabilities that could be exploited.
4. **Compatibility:** Ensure the plugin works with the latest Jenkins core and other plugins.
